**Rippe & Kingston Extends Contract Guardian Query Feature**

CINCINNATI, OH – December 10, 2008 - Rippe & Kingston Systems, Inc. a diversified information technology services firm, announced today that it has enhanced its Contract Management Software solution by introducing new query capabilities.

Contract Guardian's easy to use Query facility has been improved to allow contracts to be searched by Vendor, also called Other Party, in addition to the other selection criteria available to the end user with the appropriate security level. The search results can be easily transferred to the user in Excel or XML formats via a push of a button.

The easy to use query facility allows the user to select a variety of items to search on. Once the user has selected what search attributes they would like, as illustrated in Figure 1. A screen is presented to them as shown in Figure 2 that includes only these search options. The user then fills out the search options and the results are available for on-line review or download to download to Excel.
